PRD: Smart Pause & Skip (v2)

Tiffinly Foods Pvt. Ltd. | Product Requirements Document | Subscriptions squad

Document ID	PRD-SUB-014	**Version**	2.1 (Approved)
Product Manager	Priya Raman, Senior PM	**Date**	14 April 2026
Engineering Lead	Karthik Iyer	**Design Lead**	Sana Qureshi
Target release	2 June 2026	**Feature flag**	smart_pause_v2

1. Background

Tiffinly is a mobile app that delivers home-cooked lunch and dinner tiffins on a monthly subscription. Meals are prepared by a network of 312 home-chef kitchen partners across Mumbai, Pune, Bengaluru and Hyderabad. As of March 2026 Tiffinly has 48,200 active subscribers, and the average subscriber pays Rs 1,890 per month.

Today, a subscriber who is travelling can only stop meals through Pause v1. Pause v1 allows only a full-week pause and needs a support ticket. The average time to resolve a pause ticket is 26 hours, and pause requests generate about 4,100 support tickets every month.

2. Problem statement

Monthly subscriber churn (the share of subscribers who cancel in a month) is 9.4%. In the cancellation exit survey, **38% of cancelling subscribers say the reason is that they are travelling or away from home**. These users do not dislike the product; they cancel because cancelling is easier than pausing. Of the subscribers who cancelled while away, 61% never re-subscribed, so a temporary absence becomes a permanent loss.

> **Problem in one line:** subscribers who are temporarily away cancel because stopping meals for a few days is harder than cancelling, and most of them never come back.

3. Goals, success metrics and guardrails

ID	Goal	Metric	Baseline	Target
G1	Fewer subscribers cancel	Monthly subscriber churn	9.4%	7.0% by end of Q2 FY27
G2	Self-serve pausing	Pause-related support tickets / month	4,100	70% reduction
G3	Paused users come back	Pausers who resume within 30 days of pause end	n/a (new)	60% or more

Guardrail metrics (must not get worse while we chase the goals): (a) kitchen food waste caused by late skips must stay at or below 3% of prepared meals; (b) wallet credit issued for skipped meals must not exceed Rs 18 lakh per month across all cities.

4. Non-goals (out of scope for this release)

- Swapping one dish for another inside a meal. This is covered by a separate PRD (PRD-MENU-006).
- Cash refunds to bank accounts. Skipped meals are credited to the Tiffinly Wallet only (decision D-09, Finance).
- Corporate or office subscription plans.
- Recurring weekday skips, for example "skip every Saturday". Marked as Won't for v2.

5. Personas

Persona	Who they are	What they need from Smart Pause
Ananya, Working Professional (28, Bengaluru)	Travels for work 4-6 days a month at short notice.	Skip tomorrow's lunch in under a minute from the home screen.
Rohit, Student (21, Pune)	Goes home during college holidays for 2-3 weeks.	Stop meals for the whole holiday without cancelling or losing money.
Meera, Family Planner (41, Mumbai)	Manages tiffins for herself and her parents.	Plan pauses around festivals and family travel with a calendar view.

6. Functional requirements

Priorities use P0 (launch blocker), P1 (important, can follow within two weeks) and P2 (nice to have). The MoSCoW column shows Must / Should / Could / Won't.

ID	Requirement	Priority	MoSCoW
FR-01	User can skip a single meal (lunch or dinner) from the home screen with one tap.	P0	Must
FR-02	Skip cut-off is **9:00 PM on the previous day**, because kitchen partners plan grocery procurement at 10:00 PM.	P0	Must

ID	Requirement	Priority	MoSCoW
FR-03	User can pause a date range. Minimum pause is **2 days**; maximum pause is **21 days** per pause.	P0	Must
FR-04	A subscriber can create at most **2 pauses per 30-day billing cycle**.	P1	Should
FR-05	Every skipped or paused meal is credited to the Tiffinly Wallet at full meal value. Credit expires after 90 days.	P0	Must
FR-06	Push notification 24 hours before a pause ends, with a one-tap "extend by 3 days" action.	P1	Should
FR-07	Auto-resume is ON by default after a pause ends; the user can switch it off.	P1	Should
FR-08	Kitchen Partner Portal shows updated meal counts by 9:15 PM so kitchens do not over-cook.	P0	Must
FR-09	Save flow: when a user taps Cancel, offer Pause before confirming cancellation.	P1	Should
FR-10	Calendar view of upcoming meals with skip and pause markers.	P2	Could

7. Non-functional requirements

- Skip and pause API endpoints: 95th percentile (p95) latency below 300 ms.
- Availability of the subscription service: 99.9% per month.
- All new screens meet WCAG 2.1 AA accessibility guidelines.
- Every skip, pause and wallet credit is written to an audit log retained for 180 days.

8. Dependencies

Team	What we need	Status
Payments team	Wallet ledger API to post meal credits (FR-05).	Committed for 20 May 2026
Kitchen Ops squad (PM: Vikram Shah)	Portal change for 9:15 PM meal counts (FR-08).	In progress
Notifications platform	Scheduled push 24 hours before pause end (FR-06).	Available today

9. Rollout plan

Phase	Audience	Duration	Exit criteria
1. Dogfood	Tiffinly employees only	1 week	No P0 bugs open
2. A/B test (EXP-0412)	Mumbai and Pune subscribers, 50/50 split	28 days	Churn falls by at least 15% (relative) and both guardrails hold
3. General availability	All four cities, 100% of subscribers	-	Approved by Head of Product

10. Risks and mitigations

Risk	Likelihood	Mitigation
Late skips leave kitchens with unsold food.	Medium	Hard 9:00 PM cut-off (FR-02) and 9:15 PM portal update (FR-08).
Users pause and forget to come back.	Medium	Auto-resume ON by default (FR-07) and reminder push (FR-06).
Abuse: repeated pausing to collect wallet credit.	Low	Max 2 pauses per cycle (FR-04); credit expires in 90 days.

11. Open questions

- **OQ-1:** Should a paused subscriber keep their loyalty streak in the planned Tiffin Points programme?
- **OQ-2:** Hyderabad kitchens procure groceries at 9:00 PM, one hour earlier than other cities. Does Hyderabad need an earlier skip cut-off?

12. Analytics events to track

Event name	Fired when	Used for
meal_skipped	User skips one lunch or dinner (FR-01)	Skip volume by city and time of day
pause_created	User confirms a date-range pause (FR-03)	Pause length distribution; goal G2
pause_resumed	First delivered meal after a pause ends	Goal G3 (resumption within 30 days)
cancel_save_offer_shown / _accepted	Save flow shown or accepted (FR-09)	How many cancellations the save flow prevents
wallet_credit_posted	Credit written to the wallet (FR-05)	Guardrail (b): monthly credit cost
